

MORE HEAT *for less money*

This is how
it looks
in your
fireplace

Heats
up to
15
radiators

Just lift off
the lid
to see
the boiler

An attractive
Cooking-Pot

An efficient
Boiler

The innover Boiler Pot

innover

The innover Boiler Pot

Let's find out what a real boiler is all about

A conventional metal gas boiler costs : 22 lbs. / 5.

costs

The flames go through the tubes

the water circulates around the tubes

Compare this with *The innover Boiler Pot*

innover "Two-Boiler" costs : 22 lbs. / 5.

costs

The flames go through the tubes

the water circulates around the tubes

Energy is no longer lost! Don't rely on simple heat exchangers, which are too often inefficient and unattractive looking. Let *The innover Boiler Pot* do the work!

A model for every fireplace

Two-Boiler Model Ref. 20 000 for modern fireplaces - Total size 0.73 m high

Model Ref. 20 000 for Modern and Classic - Total size 1.20 m high

Model Ref. 20 000 for wall-hung fireplaces - Total size 0.73 m high

The innover Boiler Pot can very easily be connected up to an existing oil or gas central heating system. When the fire is lit in the fireplace, it heats the radiators throughout the house, and the main boiler remains unobtrusively. Then, when the fire goes out the flameless controlled central heating takes over.

The innover Boiler Pot can also be used on its own, providing heating for the whole house (except approx. 20 lbs. / 5).
